Project #1: Music DNA Legacies

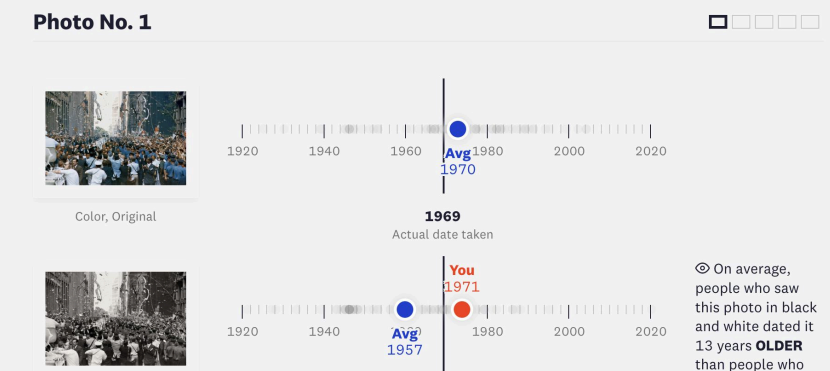

✦ **Visual**: Very simple background and albums, uses text box on the slide to narrate story

✦ **Interaction**: Uses progressive disclosure via the sticky scroll and zooming in and out of parts of the tree. Has a scrolling indicator built into design.

✦ **Overall**: Website is quite long so users could potentially lose interest, but design is easy to follow and timeline is nice since it's dynamic and interactive

Project #2: Photo History Quiz

✦ **Visual**: Also very simple background and minimal elements on the page for the quiz. Results page is consistent throughout the page, makes it intuitive to understand

✦ **Interaction**: Timeline slides are interactive and visually represent what you're choosing when you're taking the quiz. Also love the comparisons between you and others

✦ **Overall**: Interface is simple yet visually effective with the timelines to represent the time and space rather than just having plain numbers.
